

# Polini air filters for T Max

POLINI has designed three new air filters for Yamaha T Max scooters.

Two filters are for the intake system: one for the T Max with carburetor produced between 2004 and 2007, and one for the injection model sold starting from 2008.

The third Polini air filter is for the variator belt transmission cover. This filter is able to purify the air,

increasing the flow in the variator area, which Polini claims substantially improves the cooling of the variator.

All the three new Polini air filters are made of a special cotton cloth with long multilayer structure lubricated with a special low viscosity product that improves the air permeability.

# Matris FZ8 suspension kits

ITALIAN suspension manufacturer Matris has a number of new aftermarket parts for the 2010 Yamaha FZ8.

The kit includes a choice of advanced parts including MY113 Standard, Hydraulic Preload or Racing Replica monoshocks, and FY119K and KC hydraulic fork kits with the FY119S fork cartridge kit.

Steering damper options include the M3 Azoto and M4R Racing Replica.

The M4R has a high grade titanium body, stainless steel shafts and CNC aluminium hardware. The dampers are speed sensitive

and react to sudden movements by automatically increasing their damping. There is a light alloy external reservoir for compensation of fluid expansion (on this model the reservoir gas pressurised), coaxial adjuster (18 settings) on damper body, and Ti-nitride one-piece piston rod. Fitting kit and instructions are included. This kit is also supplied with a specific bottle of oil.
